Modern cars are more computerized than ever. Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to: -Build an accurate threat model for your vehicle -Reverse engineer the CAN bus to fake engine signals -Exploit vulnerabilities in diagnostic and data-logging systems -Hack the ECU and other firmware and embedded systems -Feed exploits through infotainment and vehicle-to-vehicle communication systems -Override factory settings with performance-tuning techniques -Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop.

In this revised edition, learn to make and install complete interiors in your car, truck or van. The author teaches you how to sew like an expert, and avoid costly mistakes. Learn to recover and build bench bucket seats, make headliners and carpets, plus how to build boat seats from scratch. Materials are described with specific recommendations for vinyl, cloth, velvet, leather, Nimbus, panel board, etc. Indispensable for anyone interested in upholstery.

Associationism and the Literary Imagination traces the influence of empirical philosophy and associationist psychology on theories of literary creativity and on the experience of reading literature. It runs from David Hume's Treatise of Human Nature in 1739 to the works of major literary critics of the twentieth century, such as I.A. Richards, W.K. Wimsatt and Northrop Frye. Cairns Craig explores the ways in which associationist conceptions of literature gave rise to some of the key transformations in British writing between the romantic and modernist periods. In particular, he analyses the ways in which authors' conceptions of the form of their readers' aesthetic experience led to radical developments in literary style, from the fragmentary narrative of Sterne's Tristram Shandy in 1760 to Virginia Woolf's experiments in the rendering of characters' consciousness in the 1920s; and from Wordsworth's poetic use of autobiography to J.G. Frazer's exploration of a mythic unconscious in The Golden Bough. Detailed analyses are offered of the ways in which a wide variety of major British writers, including Scott, Lady Morgan, Dickens, Tennyson, Hardy, Yeats, Joyce and Woolf developed their literary techniques on the basis of associationist conceptions of the mind, and of how modern literary criticism - from Arthur Symonds to

Roland Barthes - is founded on associationist principles. Associationism and the Literary Imagination relocates the traditions of British writing since the eighteenth century within the neglected context of its native empirical philosophy, and reveals how many of the issues assumed to be products of 'postmodern' or 'deconstructive' theory have long been foregrounded and debated within the traditions of British empiricism. This is a work which provides a radical new perspective on the history of literature in Britain and Ireland and challenges many of the assumptions of contemporary theoretical debate about the
