beginning graduate course. The content of the book, along with an understanding of probability, will provide a solid foundation for readers embarking on actuarial careers. The text has been suggested by the Society of Actuaries for people preparing for the Financial Mathematics exam. To that end, *Mathematical Interest Theory* includes more than 260 carefully worked examples. There are over 475 problems, and numerical answers are included in an appendix. A companion student solution manual has detailed solutions to the odd-numbered problems. Most of the examples involve computation, and detailed instruction is provided on how to use the Texas Instruments BA II Plus and BA II Plus Professional calculators to efficiently solve the problems. This Third Edition updates the previous edition to cover the material in the SOA study notes FM-24-17, FM-25-17, and FM-26-17.

**Financial Mathematics for Actuarial Science: The Theory of Interest** is concerned with the measurement of interest and the various ways interest affects what is often called the time value of money (TVM). Interest is most simply defined as the compensation that a borrower pays to a lender for the use of capital. The goal of this book is to provide the mathematical understandings of interest and the time value of money needed to succeed on the actuarial examination covering interest theory. **Key Features**  
Helps prepare students for the SOA Financial Mathematics Exam  
Provides mathematical understanding of interest and the time value of money needed to succeed in the actuarial examination covering interest theory  
Contains many worked examples, exercises and solutions for practice  
Provides training in the use of calculators for solving problems  
A complete solutions manual is available to faculty adopters online
