Adventures Of Ideas—Whited, Alfred, North, Whitehead— Although not well known outside academic and philosophy circles, Alfred North Whitehead is one of the intellectual giants of the 20th century, and one of the most influential thinkers of the last 200 years. His value to ordinary everyday people like us is that he deals in wisdom and common sense, not abstract, abstruse and impenetrable cant.

One meaning is the effect of certain ideas in promoting the slow drift of mankind towards civilization. This is the Adventure of Ideas in the history of mankind. The other meaning is the author's adventure in framing a speculative scheme of ideas which shall be explanatory of the historical adventure.

Philosopher, mathematician, and general man of science, Alfred North Whitehead was a polymath whose interests and generous sympathies encompassed entire worlds. Here, clearly modelled on Eckermann's conversations with Goethe and recorded in Whitehead's own home, are some of the landmarks, signposts, milestones, and noble scenery of that extraordinary mind.

Concise volume for general students by prominent philosopher and mathematician explains what math is and does, and how mathematicians do it. "Lucid and cogent ... should delight you." — The New York Times. 1911 edition.

The Turner Lectures delivered in Trinity College November 1919.

In Process and Reality and other works, Alfred North Whitehead struggled to come to terms with the impact the new science of quantum mechanics would have on metaphysics. This ambitious book is the first extended analysis of the intricate relationships between relativity theory, quantum mechanics, and Whitehead's cosmology. Michael Epperson illuminates the intersection of science and philosophy in Whitehead's work-and details Whitehead's attempts to fashion an ontology coherent with quantum anomalies. Including a nonspecialist introduction to quantum mechanics, Epperson adds an essential new dimension to our understanding of Whitehead-and of the constantly enriching encounter between science and philosophy in our century.

Process thought is the foundation for studies in many areas of contemporary philosophy, theology, political theory, educational theory, and the religion-science dialogue. It is derived from Alfred North Whitehead's philosophy, known as process theology, which lays a groundwork for integrating evolutionary biology, physics, philosophy of mind, theology, environmental ethics, religious pluralism, education, economics, and more. In Process-Relational Philosophy, C. Robert Mesle breaks down Whitehead's complex writings, providing a simple but accurate introduction to the vision that underlies much of contemporary process philosophy and theology. In doing so, he points to a "way beyond both reductive materialism and the traps of Cartesian dualism by showing reality as a relational process in which minds arise from bodies, in which freedom and creativity are foundational to process, in which the relational power of persuasion is more basic than the unilateral power of coercion." Because process-relational philosophy addresses the deep intuitions of a relational world basic to environmental and global thinking, it is being incorporated into undergraduate and graduate courses in philosophy, educational theory and practice, environmental ethics, and science and values, among others. Process-Relational Philosophy: A Basic Introduction makes Whitehead's creative vision accessible to all students and general readers.

Whitehead was among the first initiates into the 20th century's new cosmological story. This book bring's Whitehead's philosophy of organism into conversation with several components of contemporary scientific cosmology—including relativistic, quantum, evolutionary, and complexity theories-in order to both exemplify the inadequacy of the traditional materialistic-mechanistic metaphysical interpretation of them, and to display the relevance of Whitehead's cosmological scheme to the transdisciplinary project of integrating these theories and their data with the presuppositions of human civilization. This data is nearly crying aloud for a cosmologically ensouled interpretation, one in which, for example, physics and chemistry are no longer considered to be descriptions of the meaningless motion of molecules to which biology is ultimately reducible, but rather themselves become studies of living organization at ecological scales other than the biological.
