Engine

The 1998 introduced in the BMW E46 (320d) engines were initially equipped with a distributor injection pump VP44. In September 2001 (in the E46 318d only from 2003) they were revised and were from then on M47TÜ. This version was equipped with common rail injection and turbocharger with adjustable vanes on the turbine. This replaced the M41.

Bmw Engines - BMW M47 Engine
(1999-2007)

All M47 engines have one Swirl and one Tangential intake port per cylinder, which can each improve performance under different conditions. These features are not to be confused with swirl flaps, which were introduced in the M47TUD20. Applications: 85 kW (114 hp) and 265 N·m (195 lb·ft)

2007-2012 E90 uses the N47 engine that has a nasty habit of breaking the distribution chain (factory problem) and bmw has not done any recalls on the matter. A repair would likely be in the 2000-2500 euro range, around 3000\$ worst case scenario. Now from 2006-2007 the E90 had the M47 engine that didnt have this problem.
