This edition stresses not just the diagnostic cytological features of the various conditions encountered, but also the diagnostic pitfalls and the gray areas between so as to enable the reader to give more evidence-based reports. In recognition of their rapid expansion, there are new chapters on recent technological developments and on the cytodagnosis of childhood tumours. A special section on the importance of multidisciplinary team meetings that include the cytopathologist as a core member of the team has also been included at the end of each chapter. As active members of this team, cytopathologists can define their role in the management pathway and thus bring the patient and the microscope together as never before. The full text can be accessed online and images downloaded via Expert Consult.

This updated edition remains the essential text for pathologists seeking to make accurate diagnoses from the vast number of differentials.

This best-selling book provides you with a comprehensive guide to the diagnostic applications of exfoliative and aspiration cytology. The book takes a systemic approach and covers the recognized normal and abnormal cytological findings encountered in a particular organ. Appropriate histopathological correlations and a consideration of the possible differential diagnosis accompany the cytological findings. The book is lavishly illustrated, making it the perfect practical resource for daily reference in the laboratory. Provides an accessible guide to diagnostic investigation and screening. Includes a summary of major diagnostic criteria and discusses the pitfalls and limitations of cytology. Utilizes a consistent chapter structure to make finding the answers you need quick and easy. Provides updates to crucial chapters to keep you on top of the latest diagnosis and techniques. Incorporates differential diagnosis tables for easy comparison/contrast of diagnoses. Offers more than 1800 full-color images depicting a full range of normal and abnormal findings. Discusses new concepts on molecular basis of neoplasia. Explores the role of cytogenetics in cancer development.

Breast cytopathology is a field characterized by practicality and diagnostic efficacy. This book focuses mainly on morphology, with helpful hints for recognizing benign lesions and the main features of malignancy. It reviews specific features of various lesions and the consequences of the diagnosis for the management of the patient. Each chapter contains high-quality cytology images accompanying the descriptions, including comparison images to distinguish the most important morphological features and to help in the differential diagnosis. Fine needle aspiration cytology (FNAC) sampling and preparation technique, fixation, staining, and principles of its interpretation are covered. Immunocytochemistry and ancillary techniques are outlined, as well as the main clinical and radiological features of breast lesions, and the cytological diagnostics of axillary lymph nodes. This publication will be of great use to medical practitioners in their first approach to breast cytopathology, as well as to pathologists and cytotechnicians with little to moderate experience in the field.

The text of this second edition has been completely revised, planned and written with two goals in mind: to help those learning cytopathology for the first time, including pathology residents, fellows, and cytotechnology students, and to provide a resource for those who have experience in cytopathology but are faced with a difficult diagnostic dilemma. It reflects the fact that diagnostic criteria have become more refined, some types of aspiration are now more common, and terminology has changed.

This book offers a comprehensive guide to thyroid fine needle aspiration (FNA) cytology. Borderline/precursor tumors, which were introduced in the 4th edition of the WHO classification of thyroid tumors, are also incorporated. In this second edition, prominent international experts discuss the different approaches to thyroid FNA cytology employed in various countries such as Australia, Canada, China, Korea, Portugal, Switzerland, Taiwan, Thailand, Turkey, Ukraine, the USA, UK, Italy and Japan. The book not only covers key principles of thyroid cytopathology but also addresses technical aspects such as procedural complications, liquid-based cytology, immunocytochemistry, staining procedures, and potential pitfalls. Case-based descriptions and clinical findings, radiologic imaging, cytology, and histopathologic diagnosis – all complemented by a wealth of detailed photographs – will help reader understand and overcome many common dilemmas in daily practice. As such, the book represents an indispensable reference work for all cytopathologists, especially those practicing thyroid cytopathology.
