The Queen's Gambit is the chess opening that starts with the moves: . 1. d4 d5 2. c4. It is one of the oldest openings and is still commonly played today. It is traditionally described as a gambit because White appears to sacrifice the c-pawn; however, this could be considered a misnomer as Black cannot retain the pawn without incurring a disadvantage.

The basis for the hit Netflix series! “What Walter Tevis did for pool in *The Hustler*, he does for chess in *The Queen’s Gambit*” (Playboy). When eight-year-old Beth Harmon’s parents are killed in an automobile accident, she’s placed in an orphanage in Mount Sterling, Kentucky. Plain and shy, Beth learns to play chess from the janitor in the basement and discovers she is a prodigy. Though penniless, she is desperate to learn more—and steals a chess magazine and enough money to enter a tournament. Beth also steals some of her foster mother’s tranquilizers to which she is becoming addicted. At thirteen, Beth wins the chess tournament. By the age of sixteen she is competing in the US Open Championship and, like Fast Eddie in *The Hustler*, she hates to lose. By eighteen she is the US champion—and Russia awaits . . . Fast-paced and elegantly written, *The Queen’s Gambit* is a thriller masquerading as a chess novel—one that’s sure to keep you on the edge of your seat. “*The Queen’s Gambit* is sheer entertainment. It is a book I reread every few years—for the pure pleasure and skill of it.” —Michael Ondaatje, Man Booker Prize-winning author of *The English Patient*

This volume presents several multidisciplinary approaches to the visual representation of data acquired from experiments. As an expansion of these approaches, it is also possible to include data examination generated by mathematical-physical modeling. Imaging Systems encompass any subject related to digital images, from fundamental requirements for a correct image acquisition to computational algorithms that make it possible to obtain relevant information for image analysis. In this context, the book presents selected contributions of a special session at the Conference on Advanced Computational Engineering and Experimenting (ACE-X) 2016.

This book highlights peer reviewed articles from the 1st International Conference on Renewable Energy and Energy Conversion, ICREEC 2019, held at Oran in Algeria. It presents recent advances, brings together researchers and professionals in the area and presents a platform to exchange ideas and establish opportunities for a sustainable future. Topics covered in this

proceedings, but not limited to, are photovoltaic systems, bioenergy, laser and plasma technology, fluid and flow for energy, software for energy and impact of energy on the environment.

“There is something fascinating about science. One gets such wholesale returns of conjecture out of such a trifling investment of fact.” Mark Twain, *Life on the Mississippi*

The challenges in succeeding with computational science are numerous and deeply affect all disciplines. NSF’s 2006 Blue Ribbon Panel of Simulation-Based Engineering Science (SBES) states ‘researchers and educators [agree]: computational and simulation engineering sciences are fundamental to the security and welfare of the United States. . . We must overcome difficulties inherent in multiscale modeling, the development of next-generation algorithms, and the design. . . of dynamic data-driven application systems. . . We must determine better ways to integrate data-intensive computing, visualization, and simulation. . . importantly, we must overhaul our educational system to foster the interdisciplinary study. . . The payoff for meeting these challenges are profound.’

The International Conference on Computational Science 2009 (ICCS 2009) explored how computational sciences are not only advancing the traditional hard science disciplines, but also stretching beyond, with applications in the arts, humanities, media and all aspects of research. This interdisciplinary conference drew academic and industry leaders from a variety of fields, including physics, astronomy, mathematics, music, digital media, biology and engineering. The conference also hosted computer and computational scientists who are designing and building the backbone infrastructure necessary for next-generation computing. Discussions focused on innovative ways to collaborate and how computational science is changing the future of research. ICCS 2009: ‘Compute. Discover. Innovate.’ was hosted by the Center for Computation and Technology at Louisiana State University in Baton Rouge.

This volume presents the results of Computational Fluid Dynamics (CFD) analysis that can be used for conceptual studies of product design, detail product development, process troubleshooting. It demonstrates the benefit of CFD modeling as a cost saving, timely, safe and easy to scale-up methodology.

European memory institutions are repositories of a wealth of rare documents that record public domain content. These documents are often stored in 'dark-archives' to which members of the public are granted limited access, resulting in the public domain content recorded therein being relegated to a form of 'forgotten-knowledge'. Digitisation offers a means by which such public domain content can be made speedily and easily accessible to users around the world. For this reason, it has been hailed as the harbinger of a new 'digital renaissance'. This book examines the topical issue of the need to preserve exclusivity over digitised versions of rare documents recording public domain content. Based on data gathered through an empirical survey of digitisation projects undertaken by fourteen memory institutions in five European Union Member States, it argues for the introduction of exclusive rights in digitised versions of rare documents recording public domain textual content as a means of incentivising private-sector investment in the digitisation process. It concludes by presenting a detailed proposal for a European Union Regulation that would grant memory institutions a limited-term related right in digitised versions of rare documents held in their collections subject to stringent exceptions and limitations that are designed to safeguard user interests.
